

Factsheet Sympatex Climate Technology®

Sympatex Technologies GmbH:

Sympatex Climate Technology®: Guarantee for maximum performance and excellent wearing comfort

The „Sympatex Climate Technology®“ offers an optimal all-weather shoe climate. This has become possible due to a novel laminate that is made of the „guaranteed green“, i.e. 100% recyclable Sympatex membrane and a hydrophobic 3-D upper. This combination provides 100% waterproofness, an optimal cooling effect and a dynamic breathability. A guarantee for maximum performance and excellent wearing comfort.

The hydrophilic lining transfers the moisture quickly and extensively from the foot to the Sympatex membrane with optimal breathability. It is connected to the upper and transports the moisture to the outside. At the same time, it repels moisture from the outside.

An increased physical activity leads to the Sympatex membrane transporting the water vapour even quicker to the 3-D upper. Due to the rolling motion of the foot, the 3-D air chambers provide optimised air circulation and thus a ventilation effect.

The advantages at a glance:

- Pleasant foot climate
- Wearing comfort thanks to a light, durable upper
- Maximum performance
- Optimal cooling effect
- Dynamic breathability
